Customer Problem Statement Template:

Although in the literature exists a variety of techniques and strategies used as part of job recommender systems, most of them fail to recommend job vacancies that fit properly to the job seekers profiles. Thus present a general panorama of job recommendation task aiming to facilitate research and real-world application design regarding this important issue, job matching, job seeking, job search and mainly of job recommendation system. Proposed a framework for job recommendation task. At the time of commencement students/recruiters want to sign up and fill in the needed details. For the students who need to upload their resumes, the system will analyse the resume spontaneously and fill-up the requisite data. Determining the skill keywords from the resume and then matching them with the suitable jobs of their skills. The students/recruiters can add, update, delete their specifications at all times. Recruiters can create new jobs/internships, edit the previous jobs, and close the response of the jobs at any time also, they get personalized job recommendations based on their skills. The recruiters can post their new job, the system will promptly transmit push notifications to the suggested applicants. The contestants can take assessments in every domain to boost their skills which we have provided. Assessment's grade is used for creating leader board which is shown to the recruiters with the certification grades.
